Module 5: Cybercrime Case Study Analysis

Topic: RTO E-Challan Phishing Scam (Gondia/Bhandara Incident)

Student Name: [Varan Agrawal] | **Reg No:** [25BSA10099]

Course: Digital Literacy (CSE) | **University:** VIT Bhopal

---

1. Executive Summary of the Incident

A major cyber fraud incident recently occurred in the **Gondia/Bhandara region of Maharashtra**, as reported by **ABP Majha**. A victim lost **₹5 lakh** after interacting with a malicious link disguised as an official RTO (Regional Transport Office) communication regarding an unpaid traffic fine. This case highlights the increasing sophistication of local-level phishing attacks in India.

2. Definition of the Crime

The crime identified in this case is **Smishing (SMS Phishing)** combined with **Financial Identity Theft**.

- **Phishing:** A cybercrime where targets are contacted by email, telephone, or text message by someone posing as a legitimate institution to lure individuals into providing sensitive data.
- **Social Engineering:** The psychological manipulation of people into performing actions or divulging confidential information—in this case, exploiting the fear of legal penalties from the RTO.

3. Modus Operandi (Step-by-Step Mechanism)

The attack followed a structured four-step process:

1. **The Initial Contact:** The victim received an SMS claiming a pending traffic violation ("E-Challan") with a specific fine amount to create urgency.
2. **The Malicious Link:** The message contained a "spoofed" URL (e.g., echallan-pay.in or a shortened bit.ly link) designed to look like the official Government of India *Parivahan* portal.
3. **The Credential Harvest:** Upon clicking the link, the victim was prompted to enter vehicle details followed by sensitive banking credentials or a UPI PIN to "clear the fine."
4. **The Unauthorized Debit:** By gaining access to the victim's session or credentials, the attackers initiated a transfer of **₹5 lakh**, moving the funds through multiple "mule accounts" to avoid immediate tracking.

4. Target Demographics

The primary targets are **vehicle owners** who are likely to be concerned about their driving record. Cybercriminals often target specific geographic regions (like Maharashtra) and demographics that may lack the technical training to verify **.gov.in** URL extensions or identify the signs of a fraudulent SMS.

5. Consequences and Impact

- **Financial Loss:** The immediate loss of ₹5 lakh is a devastating blow to the victim's savings.
- **Data Privacy:** The victim’s banking information is now compromised, requiring the cancellation of cards and freezing of accounts.
- **Legal/Mental Stress:** Victims face the psychological burden of dealing with police reports and the low probability of fund recovery due to the speed of digital transfers.

6. Prevention and Advisory

Based on the Gondia Police advisory, the following prevention steps are essential:

- **Manual Verification:** Always check for fines directly on the official portal: https://echallan.parivahan.gov.in/.
- **Link Skepticism:** Never click on links in SMS messages. Official government domains always end in **.gov.in**.
- **Emergency Action:** In case of fraud, dial **1930** immediately to report the crime during the "Golden Hour."
